

## Best Practice Number – 1

Title: - Cleaning and Going Green.

Objective: - The College engages itself in making the campus completely clean by creating awareness among the stakeholders to produce least waste and to dispose of waste in the dustbin only. This is by making them understand through counselling. We have decided to launch a campaign, “Go Green” and to create a friendly and conducive environment for the Students.

The Context: - In this Context we have planned to plant saplings on every occasion of the college function. In the past we have planted saplings on the Republic Day and the Independence Day. Among those plants there were many plants of medicinal value and the result is that we have a beautiful herbarium inside the campus.

The Practice: - College takes the following steps towards the achievement of its goal “Go Green”. NSS wing of the students provide supports and through counselling take initiative in Going Green. On the World Environment Day which was observed on 5th June this year students took active part in planting saplings. The College Provides Financial supports to such initiatives and is committed to do so in the future also.

Evidence of Success: - A large no of Trees standing inside the campus tell the tale of success of our mission “Go Green”. There are more than Twenty Trees within a small expanse of area. There is a botanical Garden as well as a small enclosure opposite Administrative block of the college which is full of Plants.

Problems Encountered and Resources required: - We have encountered some problems in bringing the concept, Har Parisar, Hara Parisar (Each Premise, A Green Premise). There was problem of maintenance of the planted saplings because of the absence of the gardener but for last one year we have appointed a gardener through outsourcing and now the things are in proper war. The Greenness inside the campus is not only looked after properly but is also sustaining.
